Full-stack Web Development with Java only

Bridging front- & backends with Vaadin

Sebastian Kühnau
Vaadin Enthusiast

BRIEF & DISCLAIMER

Who's talking?

Berliner

+20y in web- & java development

IT studied & consulting

10+ years at Vaadin

Several technical roles

Currently Developer Advocate

Off-work mostly outdoors

01

Vaadin Birds-Eye View

How is it different?

Who's using it?

How does it work?

02

Live Demo

What is Vaadin?

and what is it good for?

Vaadin

Finnish word: "female reindeer"

Fabricated in Turku, Finland

Bringing `<web applications/>`
to the `Java {}` world.

vaadin.>

MORE ABOUT US

We've built business web applications for many verticals since the year 2000.

Vaadin

Platform & Company

OPEN-SOURCE & FREE

Core Java Framework

High-quality set of UI components

Collaboration Kit

Figma templates

3rd-party component directory

COMMERCIAL TOOLS & SERVICES

Additional components (Charts, Maps, Dashboard, ...)

Tools (Copilot, Testbench, ...)

Kits for SSO, Observability, Kubernetes, ...

Swing & Legacy Modernization (Automation Tooling, Components)

Support & Development Services

Commercial Maintenance

The full-stack developer's dilemma

Why WebDev is hard with Java?

- Outdated tech or switching stacks
- Modern web frameworks require a different language and toolchain
- Teams work in silos – backend vs. frontend, Java vs. JS

Fast and pragmatic? Not really.

Full Stack with Vaadin

Comes with **+50 ready-to-use UI- components**
(Labels, Button, Grids, Charts)

Fully integrated in **Java Ecosystem** -
Works with Spring Boot, Maven, JUnit.

Java only - no technology gap and no need of HTML, CSS or JavaScript*

Includes **modern web technologies** like NPM, Vite & WebComponents

Secure by Default –
Server-side logic, state management, and data binding included.

Easy Deployment
– Ship as jar or war, just like any Java app.

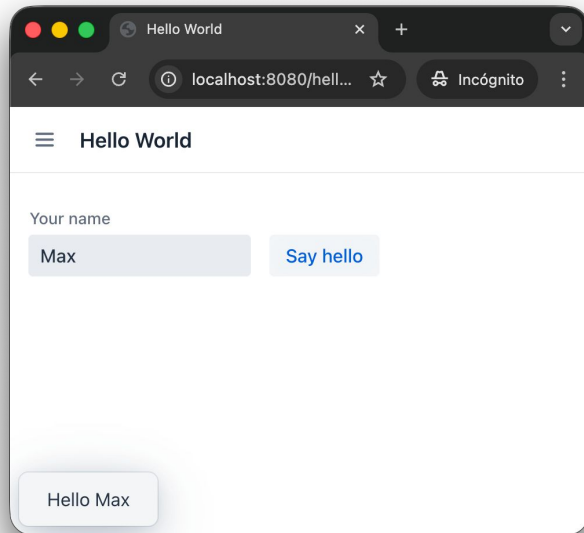

Building Web Apps with Java only

Vaadin Flow

```
@Route(value = "")
public class HelloWorldView extends HorizontalLayout {

    public HelloWorldView() {
        var name = new TextField("Your name");
        var sayHello = new Button("Say hello", event ->
            Notification.show("Hello " + name.getValue()));

        add(name, sayHello);
        setMargin(true);
    }
}
```

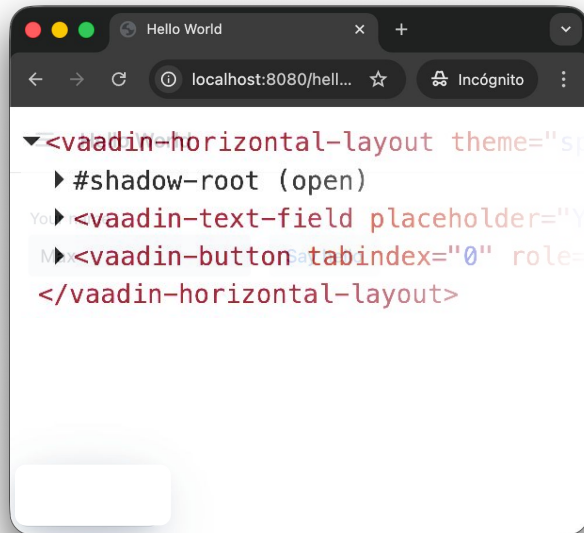

Building Web Apps with Java only

Vaadin Flow

```
@Route(value = "")
public class HelloWorldView extends HorizontalLayout {

    public HelloWorldView() {
        var name = new TextField("Your name");
        var sayHello = new Button("Say hello", event ->
            Notification.show("Hello " + name.getValue()));

        add(name, sayHello);
        setMargin(true);
    }
}
```

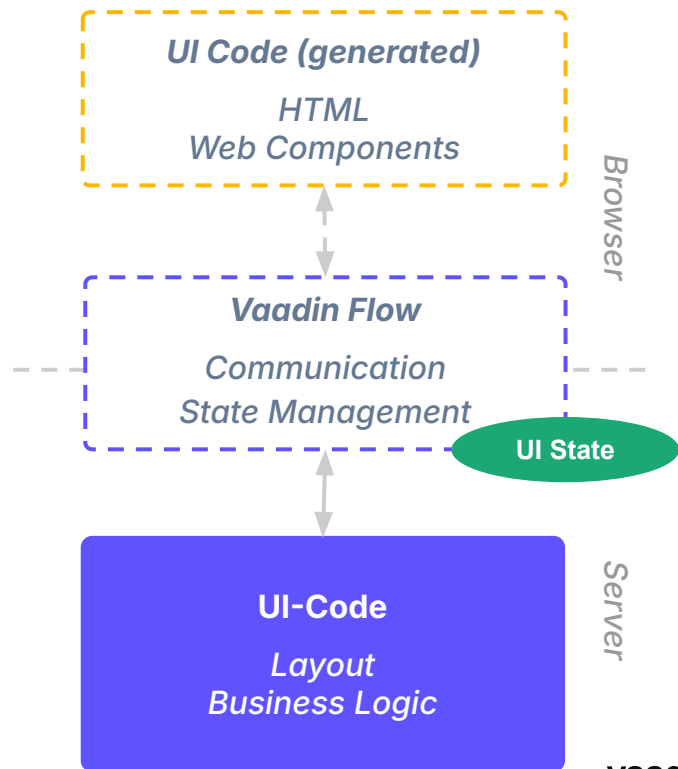

Architecture

```
<vaadin-horizontal-layout theme="spacing" has-st
  >#shadow-root (open)
    <vaadin-text-field placeholder="Your name">
    <vaadin-button tabindex="0" role="button" last
  </vaadin-horizontal-layout>
```

```
var name = new TextField("Your name");
var button = new Button("Say hello", event ->
    Notification.show("Hello " + name.getValue()));
add(new HorizontalLayout(name, button));
```

Fast and secure by default

Architecture

```
<vaadin-horizontal-layout theme="spacing" has-st
  >#shadow-root (open)
  ><vaadin-text-field placeholder="Your name">
  ><vaadin-button tabindex="0" role="button" last
</vaadin-horizontal-layout>
```

HTTPS Post

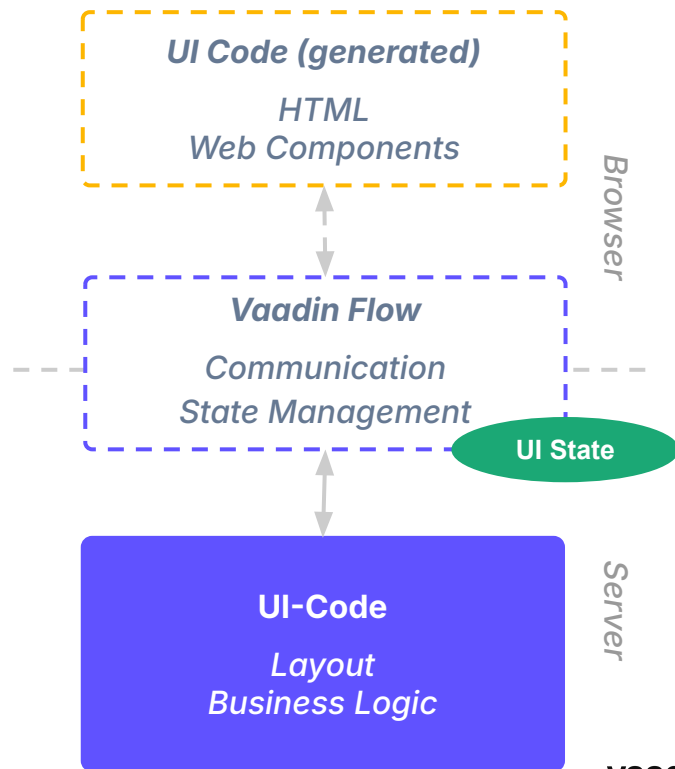

with clientId &
csrfToken

JSON Response

with clientId +1,
syncId + 1 & csrfToken

```
var name = new TextField("Your name");
var button = new Button("Say hello", event ->
    Notification.show("Hello " + name.getValue()));
add(new HorizontalLayout(name, button));
```

Using ready-made components & more

+50 Components

- Optimised for desktop & mobile
- Themable & Accessible
- Based on Web Components
- Common Architecture
- Framework agnostic

+ +2000 components in
vaadin.com/directory

+ and you can also integrate
[3rd party components](#)

Frontend, Backend & Config Included

Project structure

src/main/java for Java sources

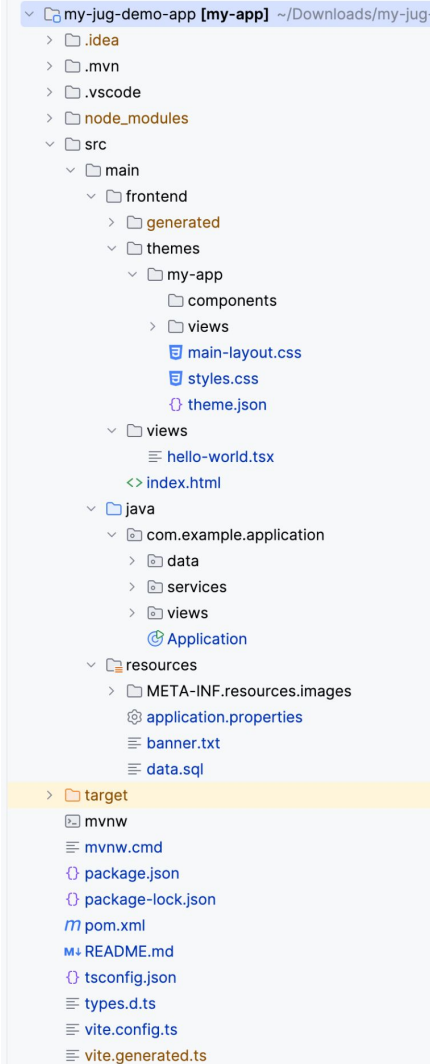

pom.xml for Java Dependencies and Maven Plugins

src/main/frontend for client side resources, e.g.

JavaScript, TypeScript, HTML, CSS files

node_modules, package.json, package-lock.json for
npm *(only after installing individual web
components)*

vite.config.ts auto generated file for Vite, frontend
build tooling

Vaadin 24+

Supported Technologies

- Java 17+, Maven 3.5+, Gradle 7.3+
- Node 18+
- Spring Boot 3.0+
- Evergreen Browsers + Safari 15
- TC 10.1, Jetty 12, Payara 6, WF 27, JBoss 8.0
- Unsupported Karaf & OSGi

Join the journey. Meet. Learn. Create.

Community

- Focus in good Developer Experience
- Open source community with +200k members
- Support via vaadin.com/forum, GitHub and StackOverflow
- Meetups, Conferences and other Events or even more

How to start?

- start.vaadin.com to create your own Vaadin Project
- start.spring.io/ add Vaadin Dependency
and create a Spring based Project
- **Starter-** & **Skeleton**-projects on github.com/vaadin
 - Spring, CDI, Gradle, Quarkus, Plain
- Tutorial on vaadin.com/start

Where to go from here?
